

PRESSIX CC

sikla

The fastest and
most efficient connection
in the rail assembly!

Pressix CC

High-speed assembly systems from professionals for professionals

The extensive product range of **Pressix CC 41** offers economical mounting solutions for the medium and high load range.

Pressix CC 27 is a compact mounting system for small loads.

As a pioneer, in 1995 we developed Pressix, the first quick mounting system developed for channel mounting. Pressix CC is constantly adapted to the market requirements and accordingly developed further and is still one of the most market-shaping innovations in fastening technology.

With Pressix CC, assembly in the channel is as quick as a flash: position the component and press the screw head into the rail. The CC connection technology locks automatically by pressing on the screw head and at the same time fixes the component's own weight against slipping. The serrated speed nut, in combination with the

rows of teeth on the mounting rail, creates a secure, form- and force-locked connection. The position can still be conveniently aligned. Just tighten the screw - done!

Pressix CC is uncomplicated to use and guarantees extremely time and cost-saving installation!

It doesn't get any faster than this ...

1

Push in ...

The threaded plate locks automatically. The position can still be aligned.

2

Tighten ...

Tighten the nut.

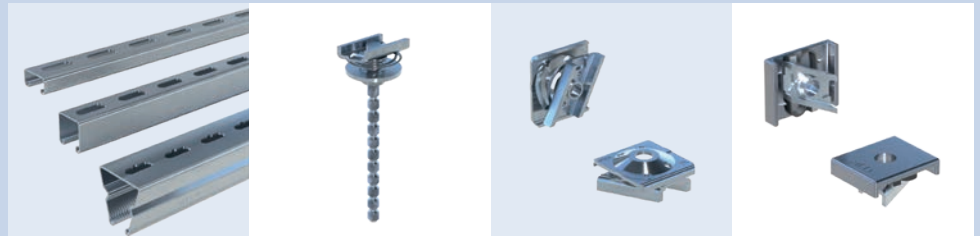

3

Done!

Pressix CC 41

The comprehensive Product range for medium and high load ranges

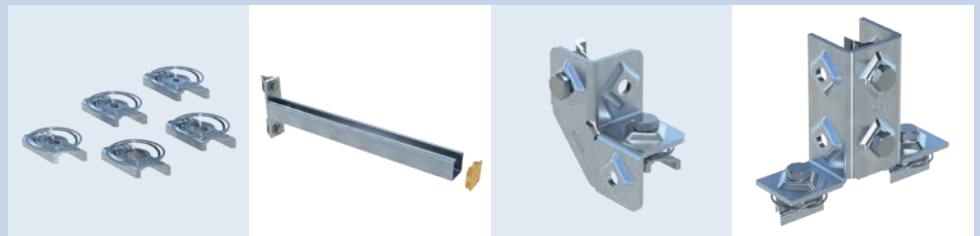

Channel MS 41

Blockset PBS CC 41

Block PBH 41

Block PB 41

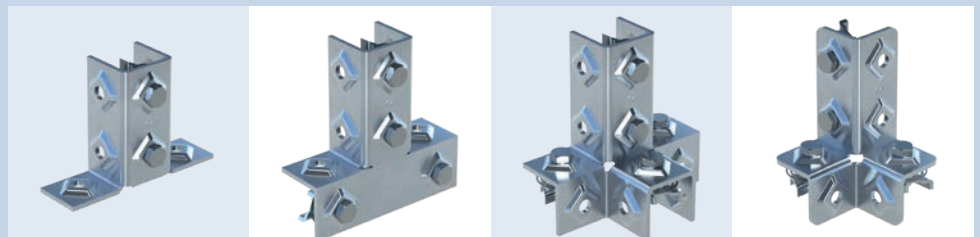

Speed Nut NT CC 41

Cantilever bracket AK CC

Angle Connector EV CC 41-1

Angle Connector EV CC 41-2

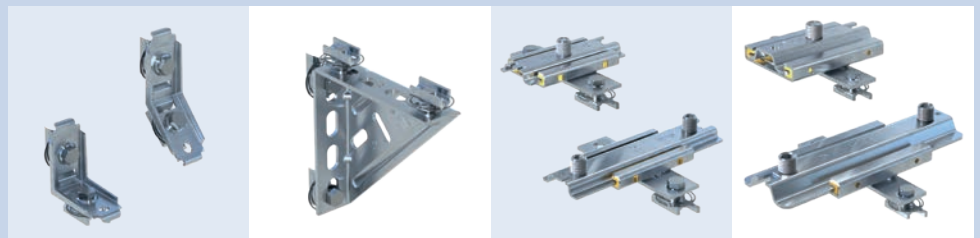

Angle Connector EV CC 41-2 W

Angle Connector EV CC 41-3

Angle Connector EV CC 41-4

Angle Connector EV CC 41-5

Angle Connector CN CC 41 Stable

Support bracket WK CC

Slide Set GS CC - H3G-PL

Slide Set GS CC - 2G-PL

More information about the **Angle Connector EV CC** you will find in our separate Flyer.

Pressix CC 27

The compact product range for small loads

Channel MS 27
